

# TECHNOLOGY AND MODULARITY IN OUR NEW MANAGEMENT SOFTWARE

Its modular structure allows it to **meet different requirements** in terms of content.

The **online databases** (spare parts, catalogs, work schedules, technical/repair manuals) guarantee swift updates, while personal and accounting data remain on your PC.

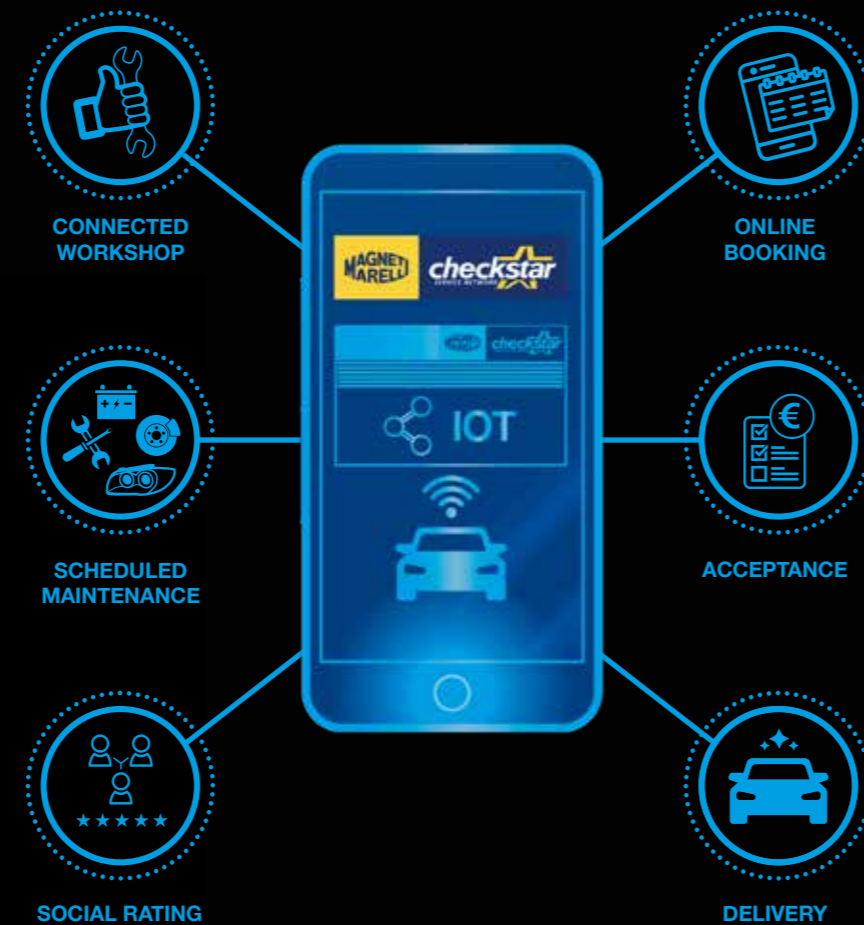

**Budgeting and invoicing** operations are appended to the accounting module, guaranteeing **complete control over internal revenue**.

STAR has integrated the **PC Station and Booking functions for inspection lines developed by the leading company Prisma Informatica**. The exchange of data guarantees the sharing of customer and vehicle information for a more efficient management of workshop and inspection line activity.

The **responsive technology** guarantees that programs can be used across different devices on the Windows and Android operating systems.

The social functions and marketing – for example **WebApp**, the **statistics section** and SMS campaigns – mean that the workshop is able to manage its own image and promote their work with tools that are aimed at their customers.

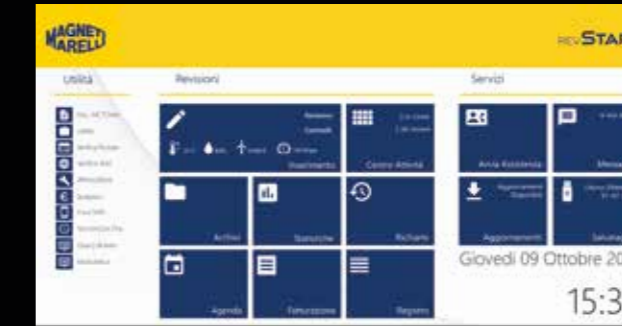

# EVERY FUNCTION IN A SINGLE PROGRAM

## HOME

This page provides quick access to certain functions through the buttons displayed in the centre of the screen. All other functions can be accessed through the taskbar on the left side of the screen.

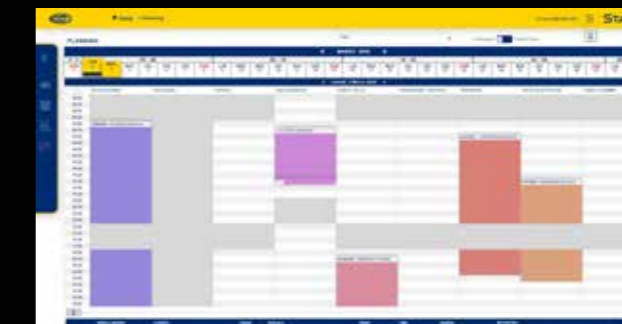

## HOME – REVSTAR

The PC Booking home screen allows for the quick and easy management of all the stages of vehicle, car or motorcycle inspection, from booking to the printing of the label to attach to the vehicle registration certificate.

## SPARE PARTS AND TIMES

Categorizing spare parts into groups makes it easier to search for OE and IAM codes along with the relative processing times and catalog prices. The tables offer an alternative way of searching for spare parts.

## CALENDAR

A calendar for noting down appointments depending on the available resources in the workshop.
