Installation of Groundwater Membrane Filtration System

Calsonic Kansei Corporation (President & CEO: Hiroshi Moriya; Headquarters: Kita-ku, Saitama-city) announced the installation of a groundwater membrane filtration system at Calsonic Kansei's R&D Center and Headquarters in Saitama-city. The system draws up groundwater and passes it through an extremely fine membrane to produce safe drinkable water, without affecting groundwater veins. With this system and existing water works, water can now be supplied through two sources.

Through this, water infrastructure providing drinkable water even when water works are interrupted by disasters has been secured. In addition, in the event water supply to the entire region is interrupted, Calsonic Kansei plans to provide drinking water to residents in the surrounding neighborhood.
